

JAVA

String Methods Part-II

JAVA: String Class Methods

- **String equals()** : method compares the two given strings based on the content of the string. If any character is not matched, it returns false. If all characters are matched, it returns true.
- **String indexOf()** : method returns index of given character value or substring. If it is not found, it returns -1. The index counter starts from zero.
- **String lastIndexOf()** : method returns last index of the given character value or substring. If it is not found, it returns -1. The index counter starts from zero.
- **String length()** : method length of the string. It returns count of total number of characters.

Will see you in Next Lecture...

Thank you!

A close-up photograph of a hand holding a black marker, completing the word 'Thank you!' in a cursive script on a white surface. The hand is positioned on the right side of the frame, with the index and thumb fingers visible, holding the marker. The marker is black with a silver band. The text 'Thank you!' is written in a fluid, cursive style, with the exclamation mark being the final stroke. The background is a plain, light-colored surface.
