

Curso Completo

Aula 013

**Iniciando uma nova
máquina virtual
(Mac, Linux, Windows)**

Plugin

```
vagrant plugin install vagrant-vbguest
```

vagrant init

```
vagrant init bento/ubuntu-16.04-i386
```

Ajuste o Vagrantfile

```
VAGRANTFILE_API_VERSION = '2'
```

```
Vagrant.configure(VAGRANTFILE_API_VERSION) do |config|
```

```
  config.vm.box = '<your>/<box>'
```

```
  config.ssh.insert_key = false
```

```
  config.vm.network :forwarded_port, guest: 3000, host: 3000    # rails
```

```
  config.vm.network :forwarded_port, guest: 9292, host: 9292    # rack
```

```
  config.vm.network :forwarded_port, guest: 4567, host: 4567    # sinatra
```

```
  config.vm.network :forwarded_port, guest: 1080, host: 1080    # mailcatcher
```

```
  config.vm.network :forwarded_port, guest: 8888, host: 8888    # jasmine
```

```
  config.vm.network :forwarded_port, guest: 3306, host: 3306    # mysql
```

```
  config.vm.network :forwarded_port, guest: 1234, host: 1234    # node
```

```
  config.vm.network :forwarded_port, guest: 5432, host: 5432    # postgresql
```

```
  config.vm.network :forwarded_port, guest: 6379, host: 6379    # redis
```

```
  config.vm.network :forwarded_port, guest: 9200, host: 9200    # elasticsearch
```

```
  config.vm.network :forwarded_port, guest: 27017, host: 27017  # mongodb
```

```
  config.vm.network :forwarded_port, guest: 80, host: 8080      # apache/nginx
```

```
end
```

Vagrantfile

<https://gist.github.com/jacksonpires/403ac7e61dfd70e302b1da281decbe15>

Inicie a nova máquina virtual

```
vagrant up --provide virtualbox
```
