

JAVA

String Methods Part-I

JAVA: String Class Methods

- **String charAt()** : method returns a char value at the given index number.
- **String concat()** : method combines specified string at the end of this string.
- **String contains()** : method searches the sequence of characters in this string. It returns *true* if sequence of char values are found in this string otherwise returns *false*.
- **String endsWith()** : method checks if this string ends with given suffix. It returns true if this string ends with given suffix else returns false.

Will see you in Next Lecture...

Thank you!

A close-up photograph of a hand holding a black marker, completing the cursive word 'Thank you!' on a white surface. The hand is positioned on the right side of the frame, with the index and thumb fingers visible, holding the marker. The marker's tip is just finishing the exclamation mark. The background is a plain, light-colored surface.
