JAVA

String Builder Class

➤ String Builder Class : StringBuilder class is a mutable class, unlike the String class which is immutable. StringBuilder class is same like StringBuffer class excerpts String Builder is non-synchronized class.

➤ StringBuilder class is mostly used when we want to concatenate many strings continuously.

➤ String Builder is preferred if we are appending something continuously in a String.

➤ Methods in String Builder Class :

➤ append()

➤ insert()

➤ replace()

➤ delete()

➤ reverse()
